

Greenhouse gases in the atmosphere keep going up. If they were actually green, the sky would look crazy, wouldn't it? Everyone knows we have to act and many of us are. But is it all for naught because your neighbour blow dries his arm pits?

**You have never heard climate change like this before. Engaging, inspiring and hopeful.**

The 2 degrees tour is a cross-Canada initiative to inspire and democratize climate action. The tour comes on the heels of a major international agreement to limit global warming to a maximum of 2 degrees C and less than 70 days before the Copenhagen climate negotiations, at which 192 countries will hopefully agree on how to avoid catastrophic climate change.

**The time is now.**

Speaker David Noble is the founder of 2degreesC, a recent visitor to both the Arctic and Antarctic, a trainee of Al Gore, an occasional writer, frequent speaker and wanna-be artist working toward an evolution of our common sense.
